

Step 1: Navigate to the testingBox.py file under chartify → example → testingBox.py

Step 2: change the axis labels if you so wish. All of them are 10 or less but if you wanted you could make it 11 and raise an error message

Step 3: run the test file by right clicking and pressing 'run'. The Program will then make the bar graph pop up in the browser! You will notice how the axis labels

were spaced into a separate line in order to make it not push the source label off screen.
